

AK 304 BROWN STREAKING GRIME FOR RED HULLS

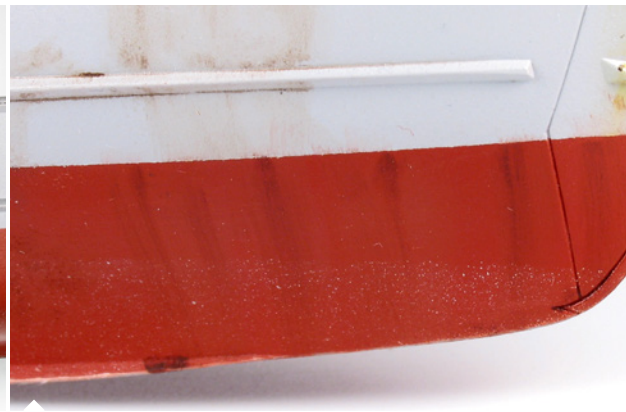

With this enamel product the modeler can easily represent streaking dirt effects on ship hulls painted in red primer. It can also be used on other surfaces such as the hull of a tank.

Start by painting the ship with the two colors, thus this is an specific product for ships built with a full hull.

With a fine brush apply the streaking effect only over the the red hull, both in vertical streaking and making stains to simulate the worn effects this part of the ship suffers through time.

Soften the effect with a flat brush as we would do with any other streaking, but bearing in mind that this kind of effect is much more subtle than any other and does not have to be strong.

Final effect applied on models.
