

AK 305 STREAKING GRIME FOR LIGHT GREY SHIPS

With this enamel product the modeler can easily represent streaking dirt effects on ships painted in light grey. It can also be used on other issues of similar color such as aircraft on AFVs.

This is an essential product for all warships as this effect always appears and it is very easy to use. It is applied over the grey hull.

Apply the product starting from the deck or any area prone to accumulate dirt, like the drains.

Then spread the product vertically softening the effect in the last part of the stroke. In warships of full hull the effect continues until almost the keel.

Final effect applied on models.
